NEW-TECH ARTICULATOR

New-Tech is an articulator for dental laboratory use. What makes New-Tech Articulator unique and different from other outdated articulators are the following:

- No plaster needed when combining the upper and lower models, therefore eliminating all mess
- For denture, partials, crowns, bridges and orthodontic purposes
- Bite can be re-set without the use of plaster
- Easy removal of models from the articulator without using plaster
- Bite can be changed to fit any position needed (up, down, right & left)
- The arms can be adjusted easily to any working position needed
- Models can be separated/removed and replaced to the original bite
